

## City of Thomasville, GA, Grows

Dean Steel Buildings, Inc., recently provided buildings for several projects for the City of Thomasville, GA.

One of the projects was for the Thomasville Regional Airport. Dean supplied an LM2 300' x 100' x 26' eave building to LRA Constructors, Inc., of Albany, GA. The building features three 90' wide bays with 22' tall Hydro-swing doors on the end bays and a 28' tall bi-fold in the center bay.

Pro-Steel Buildings, Inc., of Tallahassee, FL, completed two projects for Thomasville Public Works. The first project was a re-sheet of an existing office building. Dean furnished new Pro Seam standing seam roof panels and Snow White Rib-12 wall and fascia panels.

Dean also supplied an LR 20' x 60' x 18' with a 10' x 41' wing unit for a wash rack. The building features Dean's Pro Seam standing seam roof panels and a combination of Rib-12 Snow White wall panels and wall lights.

## Dean Joins MBMA

We are pleased to announce that we rejoined the Metal Building Manufacturers Association (MBMA) last August. Our membership with MBMA will allow greater access to bid work having strict specifications for those customers who bid on governmental or architectural projects.

Along with the membership, we are currently going through the process of accrediting our manufacturing and engineering to the IAS AC472 standard. The IAS AC472 accreditation will be in addition to our current ISO 9001 certification held by the Fort Myers plant. Your sales representative can give you more information on any of the quality assurance plans we operate under.

For more information on MBMA visit their website at [www.mbma.com](http://www.mbma.com).

## Congratulations

Congratulations to Sherry Edmondson, Cedartown District Sales Manager, on the birth of her son, Tristan Dimari Edmondson, born June 19 and weighing in at 8lbs 1oz.

Congratulations also go out to Val Guerrero, Fort Myers District Sales Manager, on the birth of his daughter Isabella Rose Guerrero. Isabella was born February 14 and weighed 2lbs 14oz. She was born two months prematurely but both mother and daughter are doing fine!

## EMPLOYEE SPOTLIGHT

Brett Jones – Rigid Frame Production, Cedartown, GA, plant. Brett was hired into the Finish Weld department in October, 2004, with strong welding skills,

blueprint reading ability, and an eye for quality. He soon began cross-training in other areas of production, and on several different lines of machinery.

Currently, Brett runs the Bar Line, a computer controlled production line that makes the flanges and connection plates for all Rigid Frame parts. He also moves into other areas of the frame line as needed, including an occasional day or two back in the Finish Weld department. Brett says he is most looking forward to an upcoming renovation/upgrade of the Bar Line that will increase its accuracy, simplify its operation, and further reduce the scrap generated by the line.

Life around the Jones household is returning to normal for Brett and his wife, Denise, now that their second child, Bryce, is sleeping through the night. Their oldest son, Bobby, seems to have taken well to his new baby brother.
