Our first job for Barnard & Sons Construction, Mendenhall, MS. is a six-unit bi-fold nested T-Hangar with a 50 x 50 bi-fold jet pod on one end. DSB provided a smoother appearance by offering to increase the jet pod width to 52' to match the T-Hangar. The hangar is located at Copiah County Airport in Hazelhurst, MS.

Dean Wins Coveted “Manufacturer of the Year” Award from SRMA

Southwest Regional Manufacturing Association presented Dean Steel Buildings with the “Manufacturer of the Year” award in the 30-99 employees category.

The award was presented at the Annual Dinner on September 23rd.

This is Dean’s first award, and we are proud to accept the distinction. Jeanie Dean-Richards accepted the award on behalf of the company.

Dean Passes AC-472 Audit with Ease

Once again, Dean Steel Buildings achieved AC-472 certification renewal after a rigorous review by the auditing firm. The auditors look for evidence of high standards in quality, processes, and production.

A company must be able to provide solid evidence that a Quality Management System is in place, and functions correctly in providing all the necessary tools to ensure we meet the customer’s expectations while producing a high quality product.

In addition, when a company has several locations, as Dean Steel Buildings does, ALL locations are audited at the same time, and ALL must pass the audit. This was a team effort, and it paid off!

Alabama Airport Association Conference – Another Successful Event

Dean Steel Buildings attended the Alabama Airport Conference again this year. As the only supplier for metal buildings, and in particular, hangars, our booth was a popular place to stop by. More than 100 companies gathered information about our services. This is a large turnout for a smaller convention.
