

DEAN

STEEL BUILDINGS, INC.

THE DEAN COLOR SYSTEM PVdF (KYNAR 500®)

The Dean Extended-Life Color System is a polyvinylidene fluoride resin based finish containing high quality pigments. It has excellent resistance against weathering, corrosion, harness, chemicals and abrasion.

PVdF coatings are highly resistant to chalking and fading due to the inherent nature of the resin's chemistry. When the PVdF resins are combined with other durable ingredients, such as ceramic pigmentation, the resulting paint's resistance to chalking and fading is unequaled. In addition, the coatings are unaffected by dirt and other airborne particles and clean easily with a little soap and water. PVdF coated panels are available with up to a 25-year limited warranty.

Please see www.DeanSteelBuildings.com for the latest information on our finishes, color selection availability by panel profile, and warranty information.
